

Product Specifications

Mindray C1A AED Bundle with HypaStop Bleed Control Kit & HypaGuard Indoor Cabinet

- **Comprehensive AED Station** – Includes an AED, bleed control kit, Mindray backpack, an AED prep pack and an indoor cabinet.
- **Mindray C1A AED** – Bundle is supplied with a fully automatic Mindray C1A AED to provide life-saving intervention.
- **Lockable and alarmed AED Cabinet** – Manufactured from aluminium, this cabinet is designed to be durable and protect your AED from damage.
- **Contains a Bleed Control Kit** – Includes essential equipment for rapid and effective bleeding control and casualty stabilisation.
- **Ideal For** - All workplaces and public environments.

The **Mindray C1A AED Bundle with HypaStop Bleed Control Kit & HypaGuard Indoor Cabinet** is a ready-to-install solution designed to ensure a company's defibrillator is highly visible, securely stored and immediately accessible when every second counts. Including a Mindray C1A AED, prep kit, wall-mountable indoor cabinet, critical injury bleed control kit, and backpack, this bundle provides essential equipment to help workplaces respond effectively to medical emergencies and ensure first aid supplies are easy to locate for both staff and visitors. It is ideal for high-traffic environments such as offices, schools, gyms, retail spaces, and public buildings as the HypaGuard cabinet provides the perfect balance of protection and visibility. **Key Benefits**

- **Mindray C1A included** – provides life-saving intervention when a casualty is suffering from a cardiac arrest.
- **Ensures quick action in emergency situations** – having the AED clearly located allows action to be taken quickly and effectively during an emergency by those in the vicinity.
- **Protects the AED unit** – the HypaGuard Indoor AED cabinet keeps the AED clean, dry and safe from damage, by protecting the components from dust, spills and accidental knocks.
- **Provides security and prevents theft** – having the key lock prevents unauthorised access or misuse of the AED and protects the device from vandalism or theft.
- **Battery-powered alarm** – the audible alarm and strobe light for this cabinet are powered by batteries so will not be affected by any power outages.
- **Enables user confidence** – the AED itself is designed to speak and guide a user through the process of administering CPR.
- **Contains a HypaStop Critical Injury Bleed Control Kit** – includes essential components to treat life-threatening bleeding such as a tourniquet and haemostatic dressings.
- **Encourages a proactive safety culture** – having an AED and bleed control kit on site demonstrates a commitment to safeguarding the health and wellbeing of staff and visitors.
- **Wall-mountable** – the indoor cabinet (provided in the bundle) means that the AED and responder kit are stored in a fixed, obvious location, protected from accidental damage while remaining easy to access.
- **Includes a Mindray Backpack** – enabling safe and easy transport of the AED when required. The AED remains secure in the cabinet when not in use, while the padded bag ensures it can be carried safely without being limited to a single location.
- **AED Prep Pack included** – contains items for preparing to use an AED, such as clothing cutters, wipes and a razor. This will allow first aiders to quickly ensure there are no obstacles to using a defibrillator on a casualty no matter where they are or what they're wearing.
- **Provides peace of mind** – knowing there's an AED on site reduces anxiety among employees and customers, especially in organisations with older populations, visitors, or in higher-risk environments.
- **Value for money** – this bundle includes an AED device, indoor cabinet, bleed control kit and AED prep kit, helping ensure staff have the essential equipment needed to respond effectively in an emergency.
