

M12 A.W.C.

ACID WHEEL CLEANER

Specialist acid-based formulation to remove brake dust and soiling from alloy wheels. Powerful yet balanced action to brighten and clean even heavily-contaminated wheels. Removes rust stains from all acid-resistant surfaces.

- Removes brake dust
- Clean bright wheels
- High-active formulation

DIRECTIONS FOR USE:

FOR CLEANING ALLOY WHEELS: For best results, use as a wheel pre-treatment before washing the vehicle with a professional TFR. Apply liberally to the wheel surface, paying attention to grooves and areas with heavy accumulations of brake dust. Allow up to 10 minutes contact time but do not allow to dry on wheel surface. After allowing contact time, agitate if required using a suitable wheel-cleaning brush. Rinse wheels thoroughly using a pressure-washer.

FOR RUST STAIN REMOVAL: M12 A.W.C is also ideal for the removal of rust stains from all acid-resistant surfaces. Remove heavy or loose deposits, then apply liberally to the rust stain and allow to work for up to 10 minutes before working with a suitable cloth, sponge or brush. Rinse thoroughly with clean water.

CONTAINS:
phosphoric acid
