

ERADICRETE™

SCRUBB

PRODUCED BY Orcahygiene.

ULTRA-SAFE CONCRETE REMOVER THAT ACTUALLY WORKS.

Say goodbye to dangerous acid-based chemicals, without compromising on performance! A unique blend of plant-based ingredients, ERADICRETE™ makes light work of concrete and cement buildup without posing a danger to the user, the equipment or the environment. Unlike conventional concrete removers, this non-fuming, fully biodegradable solution is easy and safe to use on virtually any surface. ERADICRETE™ takes the hazard and the hassle out of plant and equipment clean up.

- Non-toxic, non-corrosive formulation
- Will not damage equipment or surfaces
- Removes concrete, cement and limescale

DIRECTIONS FOR USE:

Ensure surfaces are cool to the touch and remove loose dust and debris. For best results pre-wet areas of concrete build-up with water. Then apply a thorough covering of ERADICRETE™ foam. Between 15-30 minutes dwell time is sufficient for medium levels of build-up, by which time the concrete should be sufficiently softened for removal with a pressure washer. Areas of heavier deposits may require multiple applications. Alternatively, ERADICRETE™ may be applied as above and left to dwell overnight, then rinsed the next day.
