

Medium 3M 6800 Medium Full Face Mask

The 3M 6800 Medium **respirator** fits 80% of the population, and I would argue that most individuals that fit the large respirator, can also fit this respirator. The dimensions of this mask from top to bottom are 7.5 inches with an opening of 5-1/2 inches. From side to side, the width of the opening is roughly 5.5 inches, with the opening being about 4-1/4 inches.

Large 3M 6900 Large Full Face Mask

The 3M 6900 Large Full face respirator **here** is distinguished by the *dark grey* rubber face seal. The mask openings top to bottom are 7-3/4 inches with an open space of 5-3/4 inches making the mask slightly larger in opening. From side to side the measurements are 5.5 inches with an opening of 4-1/2 inches. When held side to side, the large mask spreads open slightly more, but the differences are subtle. Not like the size differential you see with the small sized mask.

Small 3M 6700 Small Full Face Mask

The 3M 6700 Small Full face respirator **here** is distinguished by the *light grey* rubber face seal. The small version of the mask is suitable for small children or individuals of very small head/face size. To get a feel for the size of the small mask, let me share the following with you.

The opening of the mask top to bottom is roughly 6.5 inches with 5 inches of "opening". From side to side the opening is 5-3/4" with an opening of 3.5". As you can see in the pictures, the opening, compared to the other masks is quite markedly smaller. This mask really should be classified as "children's size respirator" as we here at Enviro don't know of many, if any adults that could successfully wear this mask.
