

Installation Guide - Tuff-Tile Diamond

- ◆ Start by selecting your chosen starting point and roughly lay the tiles around it.
- ◆ Using the arrow-shaped corners, which are marked by the circles, ensure the tiles are positioned correctly making sure all the arrows are facing the same way.
- ◆ The tiles can be cut to fit any size or shape, using the cut gridlines on the reverse of the tiles.
 - ◆ For any difficult or complicated positioning, we recommend creating a template.
- ◆ Carefully align the tiles and gently tap them together using either your hands or a rubber mallet.
- ◆ To fit the edges, align the male or female ramped bevels to the corresponding male or female tiles, as indicated.
- ◆ For a secure fit, overlay the bevels using the brick-style method. To create both internal and external corners, cut along the guideline on the underside of each bevel.
