

Product Specifications

LifeVac EMS Kit

- **Life-Saving Anti-Choking Device** – At time of publication, the LifeVac has contributed to saving over 5,000 lives and counting, offering critical support during choking emergencies on the go.
- **6 Masks Included** – 1 extra-large, 1 large, 2 medium (one being a test mask), 1 small and 1 paediatric mask.
- **Regulated Medical Device** – CE marked, UKCA marked, MHRA regulated and MDR compliant.
- **One-way valve and suction system** – Offers non-invasive airway clearance while reducing the risk of pushing obstructions deeper, protecting both the casualty and responders
- **Essential for Emergency Use** – Designed for first responders, EMS teams, and first aid training providers, ensuring rapid and effective airway clearance in critical situations.
- **Please allow up to 1 week for delivery**

Coming supplied in a grab bag, the **LifeVac EMS (Emergency Medical Services) Kit** is ideal for emergency responders to keep in their vehicles or bags. Having the anti-choking device readily available during an incident could mean the difference between a patient's survival or death. **A Unique Valve and Suction Mechanism** The LifeVac features a unique valve and suction mechanism specially designed to reduce the risk of pushing the blockage deeper or causing further harm to the casualty. It is one of the key features that distinguishes it from inferior counterfeits. When the LifeVac device is depressed, the mask forms a seal around the casualty's mouth and nose, allowing air to be pushed out through the side vents via the one-way valve. This valve ensures that air can exit but cannot re-enter the mask, preventing the obstruction from being forced further down the airway. **Key Benefits**

- **Multiple mask sizes included** – the LifeVac EMT Kit is supplied with six mask sizes (extra-large, large, medium, small and paediatric) to ensure an effective seal and optimal performance across a range of patient anatomies.
- **Training mask provided** – a dedicated practice mask is included to facilitate familiarisation and skill maintenance prior to field deployment.
- **Compact, durable construction** – engineered for professional environments, the LifeVac EMT Kit features a robust yet lightweight design for convenient storage and rapid access in emergency response vehicles or trauma kits.
- **Regulated Medical Device** – CE marked, UKCA marked, MHRA regulated and MDR compliant
- **One-way valve and suction system** – Offers non-invasive airway clearance while reducing the risk of pushing obstructions deeper, protecting both the casualty and responders.
- **Manual operation** – no power source required; designed for immediate readiness and functionality in all clinical and pre-hospital environments, independent of electrical or battery power.
- **Device replacement programme** – following any clinical use, eligible users may request a complimentary replacement device by submitting the usage report form available from LifeVac.

The LifeVac EMS Kit Includes:

- LifeVac Unit.
- 1 Paediatric Mask.
- 1 Small Child/Adult Mask.
- 2 Medium Adult Mask (1 is a test mask).
- 1 Large Adult Mask.
- 1 Extra-Large Adult Mask.
- 1 Window/Door Sticker – to easily identify where a LifeVac is stored.

How to Use the LifeVac EMS Device

- Push and twist the mask into the base of your LifeVac unit.
- Hold the mask firmly in place over their mouth and nose with your less dominant hand, making sure their head is tilted back.
- Use your dominant hand on the LifeVac handle,

depress and then pull upwards with a short, swift tug (while holding the mask firmly in place).

- Roll the person onto their side, check their mouth to clear any debris, and repeat the process up to five times if the obstruction is not cleared.

Ideal For Use In

- Ambulances and emergency response vehicles
- Care homes and nursing facilities
- Hospitals and GP clinics
- Schools and childcare centres
- Restaurants and food service establishments
- Workplaces and office buildings
- Public venues and community centres
- Private residences with at-risk individuals
- Transport hubs (airports, train stations, bus terminals)
- Assisted living facilities
