

Product Information and Assembly Instructions - Breaker Blocker 480/600V Lockout Kit CB15

Step 1 Clean panel surface with alcohol wipes

Clean oils and other debris from the circuit breaker panel face using the provided Alcohol wipes

Step 2: Aligning mounting rails

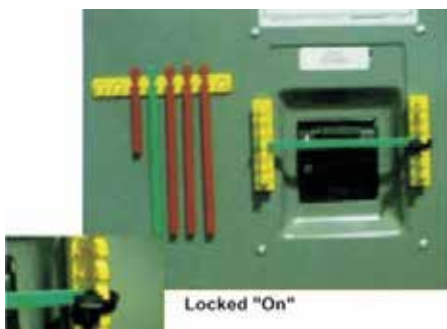

The red bar is used to lock off the switch during lockout/tagout applications. The green bar can be used as a security device to lock on. Position the red/green bars through the yellow mounting rails and against the switch

Step 3: Rail adherence to breaker face

Align the yellow mounting rails on each side of the breaker switch with the marks made in step 2. Peel the backing from the "High Bond" permanent tape and lace the rails onto the cleaned surface.

Step 4: Lock & tag blocking bar

check all is secure

(Note: Failure to clean panel with alcohol wipes can result in a poor bond between the yellow rails and panel surface)
