Protecta Plus

DESCRIPTION

Manufactured entirely with Protecta fibre. Protecta gloves offer a high degree of dexterity, reduce hand fatigue and allow the hand to breathe.

Protecta is a grey coloured multi-fibre thread based on the new Tsunooga® cut resistant fibres made by TOYOBO in Japan.

These Protecta fibres enrobe the fibre glass fibres. This wrap effectively avoids any of the fibreglass fibres to come in contact with the skin of the user which sometimes cause an allergic reaction.

This combination offers 14 times better cut resistance, over any type of existing Para-aramid products.

RECOMMENDATION

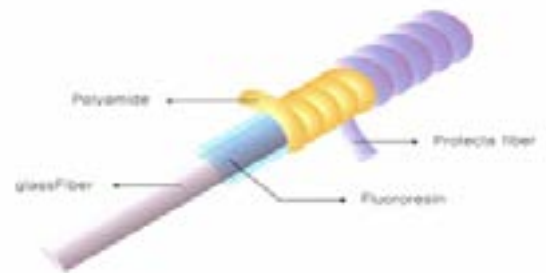

- Handling sharp metal sheets, glass, blades and knives.
- Industries: glass, canning, railroad.
- Where excellent finger movement and good touch sensitivity is required.

PRODUCT INFORMATION

Material	Protecta fibre, Tsunooga. Cut resistant fibres. PU coating.
Colour	Grey
Packaging	10 pairs per bag/100 pairs per case
Sizes	6-12

"Protecta Plus Thread" Composite Yarn

Newly developed unique multi-fiber thread combination

No glassfiber flock on the surface. No skin irritation.
