

Product Specifications

Mindray C1A AED Bundle with HypaGuard Outdoor Cabinet

- **Mindray C1A AED** – Bundle is supplied with a fully automatic Mindray C1A AED to provide life-saving intervention.
- **Durable Outdoor Cabinet** – Manufactured from cold-rolled steel and polycarbonate, providing protection for first aid supplies against damage.
- **Temperature Controlled** – Designed for outdoor use, the cabinet maintains a regulated internal temperature, clearly displayed on the front, to ensure the defibrillator remains protected at all times.
- **Bleed Control Kit** – Includes essential equipment for rapid and effective bleeding control and casualty stabilisation.
- **Backpack and Prep Pack Included** - Enabling safe transport of the AED while providing essential items to quickly prepare a casualty for defibrillation.

The **Mindray C1A AED Bundle with HypaGuard Outdoor Cabinet** is a ready-to-install solution designed to ensure a company's defibrillator and bleed control kit are highly visible, securely stored and immediately accessible when every second counts. The bundle includes a temperature-controlled cabinet built to display an AED and bleed control kit clearly while also protecting them from accidental damage, dust, and tampering, even in extreme weather conditions. The bundle also includes the HypaStop Critical Injury Bleed Control Kit, the Mindray C1A AED, an AED Responder Kit, and a Mindray Backpack. Having both a bleed control kit and an AED clearly visible and accessible ensures that first aid can be provided quickly in life-threatening situations. These supplies demonstrate a company's commitment to improving and promoting emergency preparedness. **Key Benefits**

- **Mindray C1A included** – provides life-saving intervention when a casualty is suffering from cardiac arrest.
- **Protects the AED unit** – this HypaGuard cabinet keeps the AED and bleed control kit clean, dry and safe from damage, by protecting the components from dust, spills and accidental knocks.
- **Temperature-controlled environment** – the cabinet has a temperature control ensuring that the device isn't damaged by extreme weather.
- **Contains a HypaStop Critical Injury Bleed Control Kit** – includes essential components to treat life-threatening bleeding such as a tourniquet and haemostatic dressings.
- **Includes a Mindray Backpack** – enabling safe and easy transport of the AED when required. The AED remains secure in the cabinet when not in use, while the padded bag ensures it can be carried safely without being limited to a single location.
- **AED prep pack included** – contains items suitable for preparing to administer an AED, such as clothing cutters, wipes and a razor. This will allow first aiders to quickly ensure there are no obstacles to using a defibrillator on a casualty no matter where they are or what they are wearing.
- **Provides security and prevents theft** – having a keypad lock prevents unauthorised access or misuse of the AED and bleed control kit, protecting them from vandalism or theft.
- **Waterproof cabinet** – the HypaGuard Outdoor Cabinet has a waterproof rating of Ingress Protection 56 to protect the electrical features of the AED and temperature controls from water damage.
- **Provides storage for essential emergency response tools** – a bleed control kit includes everything needed to control bleeding and stabilise casualties until help arrives, such as haemostatic gauze, gloves and a tourniquet.
- **Inspection window** – a clear polycarbonate window allows the AED and bleed control kit to be visible to those passing by the cabinet and will allow inspectors to see expiry dates without opening the door.
- **Immediate alert when accessed** – the cabinet alarm is triggered when the door is opened, notifying nearby personnel and ensuring everyone knows the AED has been removed for an emergency.
- **Faster emergency response time** – having the cabinet clearly visible will reduce the amount of time responders spend trying to locate the equipment when seconds matter.

- **Battery and mains powered** – the cabinet alarm is powered by batteries so will not be affected by any power outages, while the temperature is controlled by mains with an attached plug.
- **Clearly labelled** – the HypaGuard cabinet is labelled in clear, bold writing as well as the universal sign for a defibrillator to ensure easy identification in an emergency situation.
- **Value for money** – this bundle includes an AED, an outdoor cabinet, bleed control kit and AED prep kit, ensuring staff have the necessary equipment in an emergency.
