

Smart Road Safety Warning Light Group

The intelligent road safety warning light uses advanced wireless communication technology to automatically dock and sequence multiple warning lights, and can monitor and synchronize the flashing and position status of each product from time to time. The warning light is easy to operate. It only needs to operate any function of any warning light at random to quickly control the function of all the flashing lights. The single product contains 1 colors (we can make them in red, yellow, amber or blue). The lights can be switched freely to other flashing modes. This is unmatched by other warning lights on the market. Warning lights are easy to carry and suitable for police, traffic police, fire, road and bridge construction and maintenance, airport slide lights, runway warnings, etc.
